

Vision

Australia is the global leader in trusted, connected and converging digital technologies.

Purpose

To advance the development and adoption of trusted digital technologies and drive confidence in how people and things connect to digital networks for the benefit of industry, government and Australian consumers.

Core Work Areas

Trusted Technology

- Security frameworks
- Privacy and governance
- Transparency standards
- Digital trust enablers

Connected Systems and Data

- Connected technology convergence
- Data analytics
- Integration standards
- Connectivity solutions

Industry Transformation

- AI and emerging tech
- Workforce capability
- Adoption pathways
- Sector applications

How We'll Deliver

- Member-driven: Priorities set by member input, not assumptions
- CEO-Led Coordination: Professional support, not volunteer-dependent
- Focused Scope: Three horizontal workstreams and an Advocacy Committee
- Measurable Outcomes: Tangible deliverables, implementable work products.

Objectives

To position the organisation as the essential forum for knowledge and collaboration on trusted, connected and converging technologies. We will:

- Advance national standards and governance frameworks
- Develop and promote best practice guidance
- Strengthen government, industry and consumer understanding of trusted digital solutions
- Deliver high-impact activities for members
- Build strategic partnerships with complementary bodies.
